

VitaFit Engage+ Initiative (Final Submission)

Description

Two features: Gamification (streaks, XP, rewards) and Community Challenges to improve engagement and retention.

Problem

Users drop after 2–3 sessions due to low motivation and lack of social connection.

Why

Low WAU, low session frequency, user feedback indicates loss of motivation.

Audience

Primary: Working professionals (22–40). Secondary: Gen Z users.

User Persona

Riya, 27, working professional. Wants quick guided workouts but struggles with consistency and motivation.

User Journey (Before vs After)

Before: Starts workout → loses motivation → drops off. After: Sees streak → joins challenge → earns rewards → continues usage.

Solution

Gamification: streaks, XP, badges. Community: challenges, leaderboards, social feed.

Success Metrics

D7/D30 retention, sessions/week, challenge participation, streak completion.

Edge Cases

If streak breaks → show recovery option. If low participation → auto-match users into groups.

Execution Plan

Phase 1: MVP (streaks, basic challenges). Phase 2: rewards + social features.

Impact

Improved engagement, habit formation, stronger community, higher retention.

Stage	Timeline
Wireframes	Week 1
Prototype	Week 2
Development	Week 3-5
Beta	Week 6
Launch	Week 8
