

Slide 1: Title + Scenario

Product Discovery, Market & User Research
Community-Based Local Service Discovery on WhatsApp

- WhatsApp widely used in India
- Society groups used for local services
- Discovery is informal and chat-based
- Repeated service requests
- Opportunity to improve structure without becoming a marketplace

Slide 2: Market Research

- High WhatsApp penetration in urban & semi-urban areas
- Frequent local service needs
- Mix of recurring and urgent demand
- Low to mid-ticket services

User Behavior:

- Trust-driven decisions
- Preference for neighbor recommendations
- Convenience over price comparison

Slide 3: Competitor Analysis

Formal Marketplaces:

- Structured listings
- Ratings & reviews
- Booking + payments
- Less community-driven

Informal Channels (WhatsApp Groups):

- High trust
- Hyperlocal relevance
- Not searchable
- Repeated requests
- Chat clutter

Gap Identified:

- Lack of structured, persistent trust

Slide 4: User Interview Plan

Target Users:

- Residents
- Society Admins
- Local Service Providers

Interview Focus:

- How services are discovered today
- Trust decision factors
- Pain points in WhatsApp groups
- Moderation challenges
- Vendor acquisition methods

Slide 5: Key Insights

- Trust is community-driven
- Recommendations get buried in chats
- Same service requests repeated
- Recently mentioned vendors get attention
- Admins face moderation fatigue

Core Observation:

- Problem is structured trust, not availability

Slide 6: Conclusion

- Service discovery already happening on WhatsApp
- Current system is informal and repetitive
- Trust is strong but unstructured
- Opportunity lies in improving community-based discovery
- Focus: Understanding the problem before solutioning
